

A VARIANT HUMAN $\alpha 7$ ACETYLCHOLINE RECEPTOR SUBUNIT,
AND METHODS OF PRODUCTION AND USE THEREOF

Abstract of the Disclosure

5 A variant human $\alpha 7$ nicotinic acetylcholine receptor
(nAChR) polypeptide is provided wherein the variant contains an amino
acid substitution at the valine-274 position of the wild-type human $\alpha 7$
nAChR. Nucleic acid molecules encoding the variant human $\alpha 7$ nAChR,
vectors and host cells containing such nucleic acid molecules are also
10 provided. In addition, methods are provided for producing the variant
as are methods of using such variants for screening compounds for
activity at the nAChR.
